MESSAGE - COMMUNICATION

Dear Doug;

I got a note today from Peter Morrison, a VHF Ham in Edmonton, with a list of the repeaters in Canada. I would like to put you up to date with the latest information on the Whitehorse, Yukon repeater. The Input Freq is 146.34; the output 146.94. It will use a Motorola PF-300 as TX and RX into a Sinclair Q202 Duplexer and a Sinclair 237A antenna. CW Ident, Cor, and timers will be built here. The repeater will be located on 6700 foot Flat mountain which is about 15 miles North of Whitehorse. Access is by Helicopter. Most of the equipment has been purchased except for batteries. Auto - patch is being considered as we have an extra tube type repeater on hand now. The Call sign for the Whitehorse Repeater is VE8BWR in memory of Silent Key VE8BW, Larry Wilson. The Call has been issued by DOC and the holder of the License is Jack Wreggett, VE8RG. Will keep u informed as to when this unit will be on the air, it should be operational as soon as the snow melts on the mountain.... Many Thanks

Ron McFadyen VE8AD
